

VMware and Ubuntu Installation Guide

By: Jnaneshwar Bohara

VMware Workstation Player is an ideal utility for running a single virtual machine on a Windows or Linux PC. Organizations use Workstation Player to deliver managed corporate desktops, while students and educators use it for learning and training.

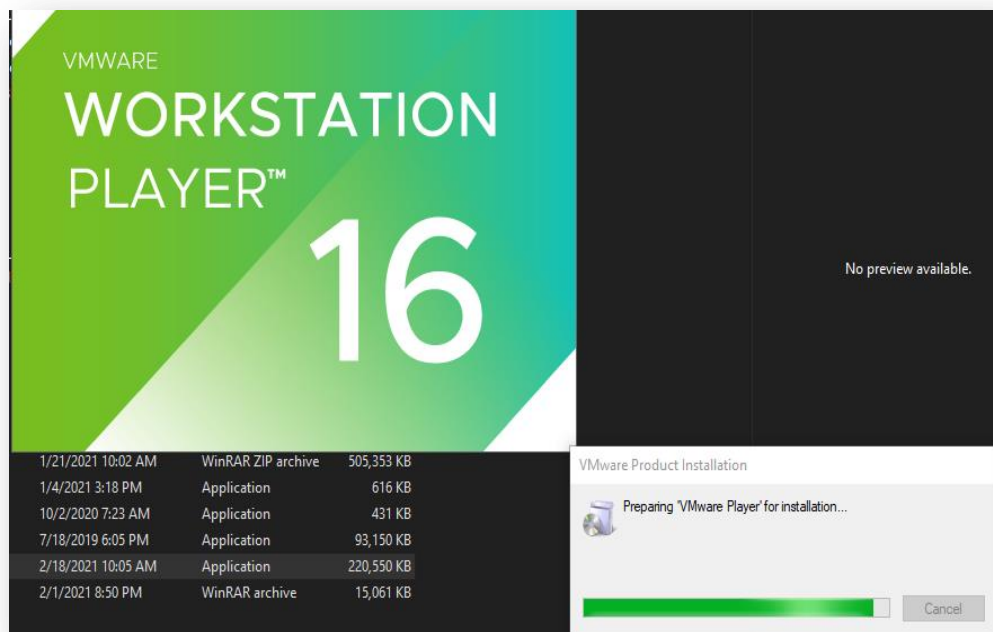

For the learning purpose we are going to use this particular version. However, there is pro version for much more advance features which is paid version.

1) First, to download the VMware follow the link below

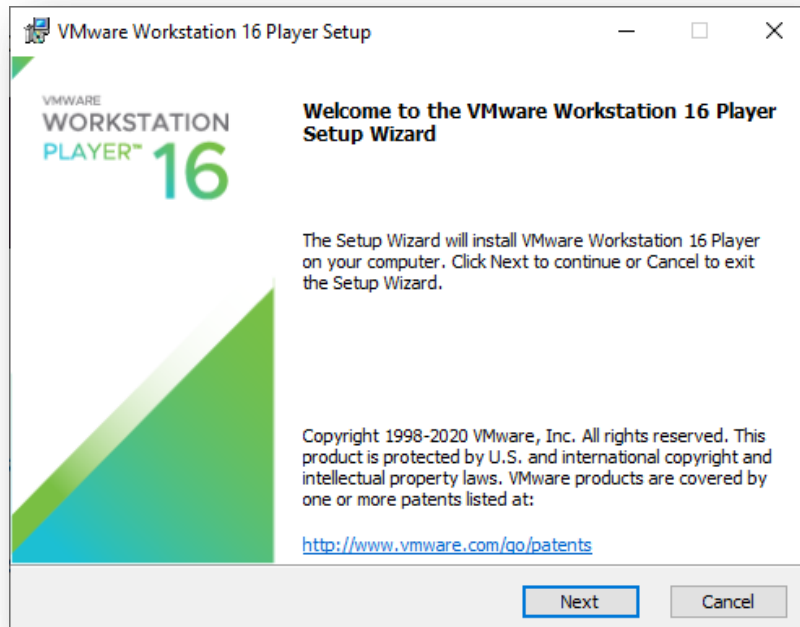

- [VMware Workstation Player - My VMware](#)

Note: If you see content not available page. Use **another browser**. If you find Ubuntu installation slow in the VMware please download **Older version of vmware**.

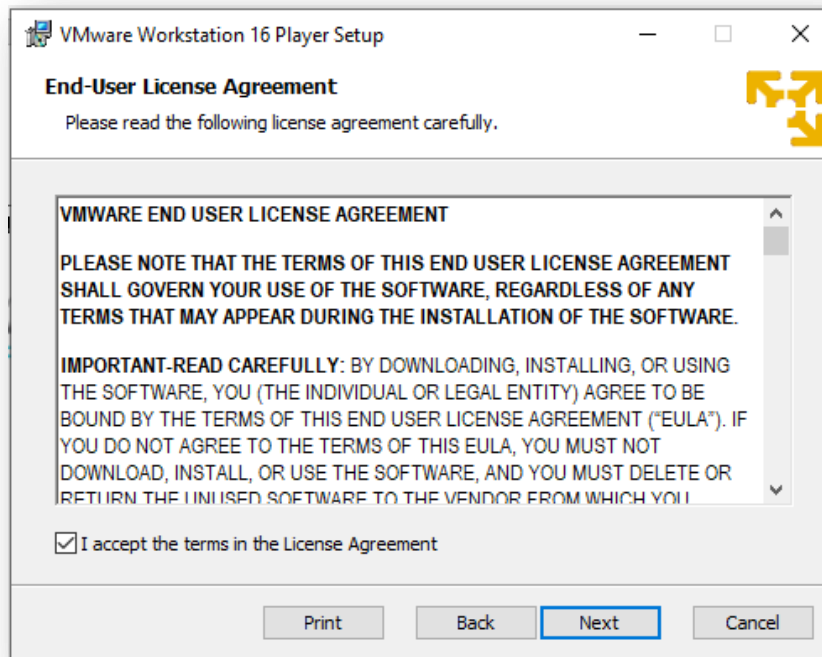

- 2) Click on appropriate version for your OS.
3) Double Click to start the installation (On Windows)

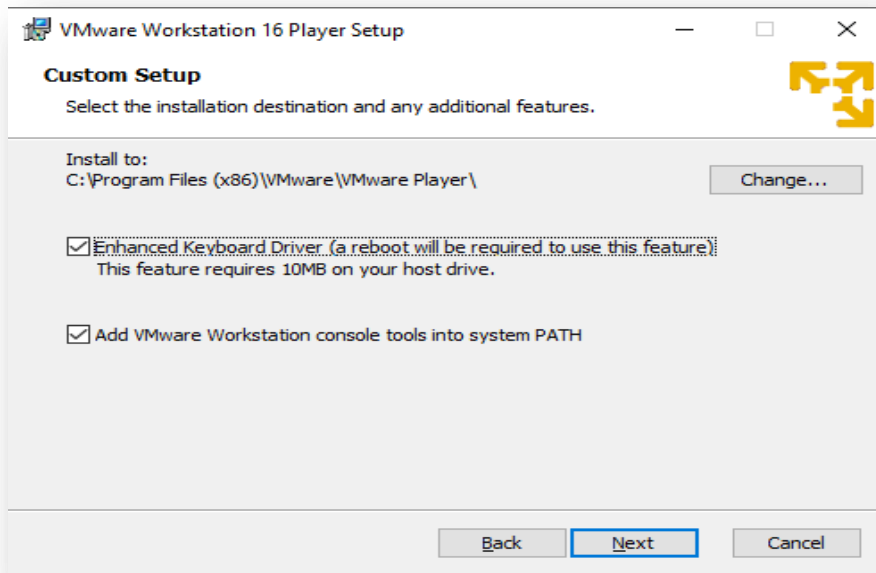

4) After the preparation is finished next window will appear , Click next

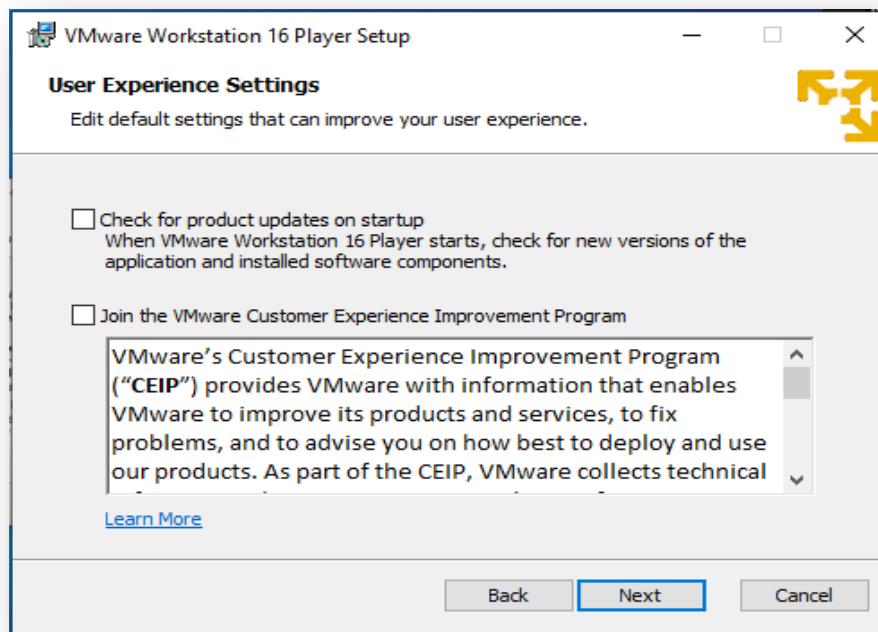

5) Accept the End-User License Agreement

- 6) Check the Enhanced keyboard Driver and Add the path to the system
- The enhanced keyboard driver is critical for virtual keyboard feature, which enables you to have better experience when handling international keyboards and that with extra keys.

- 7) You can uncheck for product updates as that may not be necessary for now.

8) Check for shortcut options as per your need.

9) Now you are ready to install the VMware

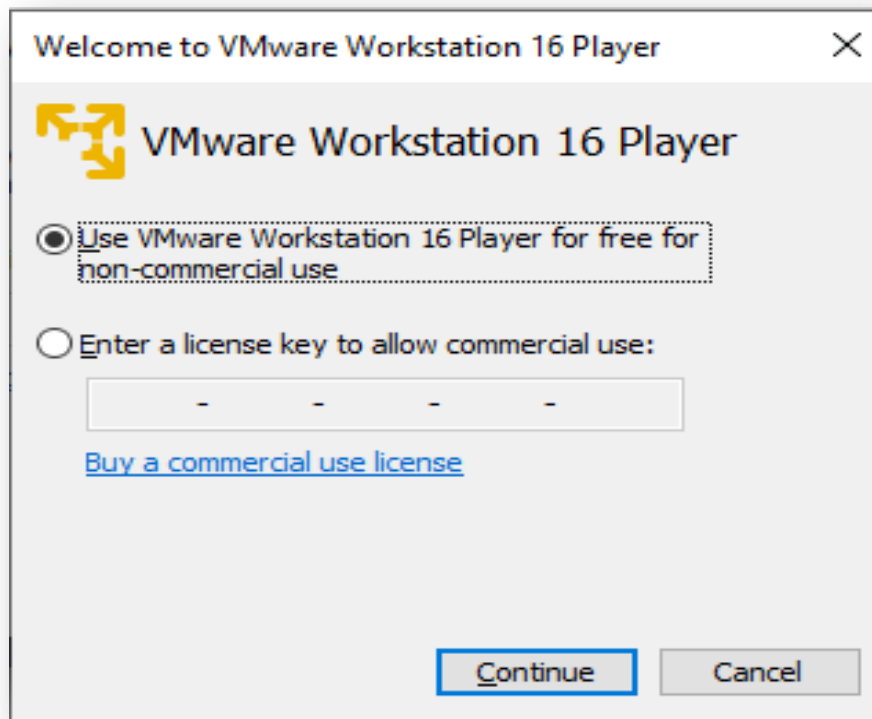

10) Your installation will begin shortly

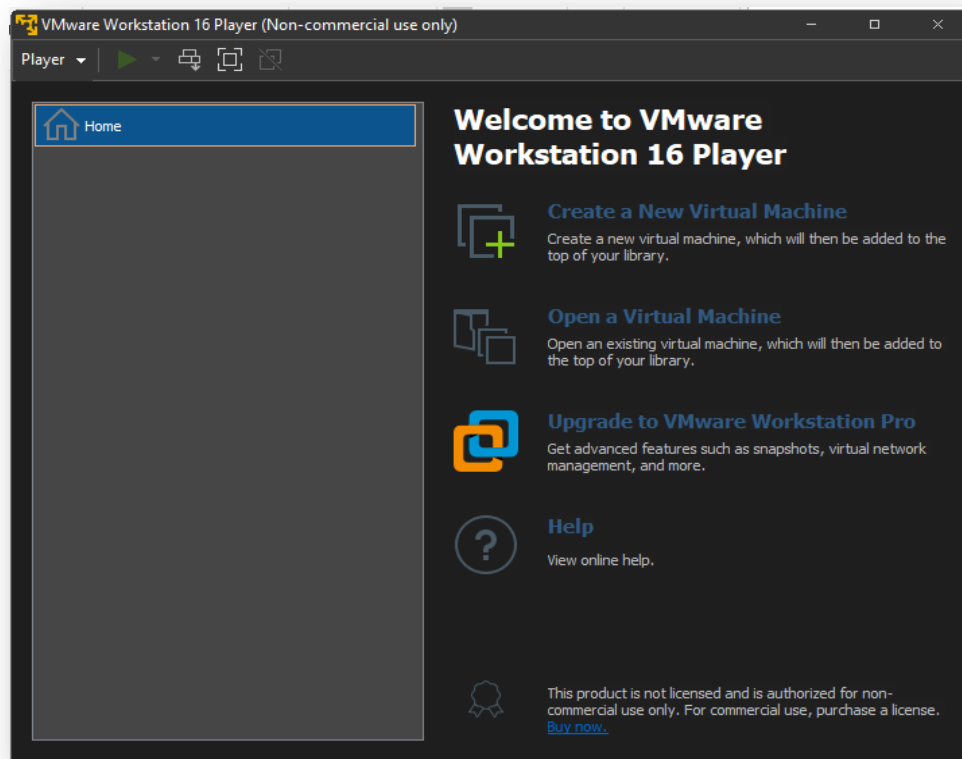

11) Click on the finish button and you may need to restart your pc.

12) Click on use VMware Workstation for free for non-commercial use

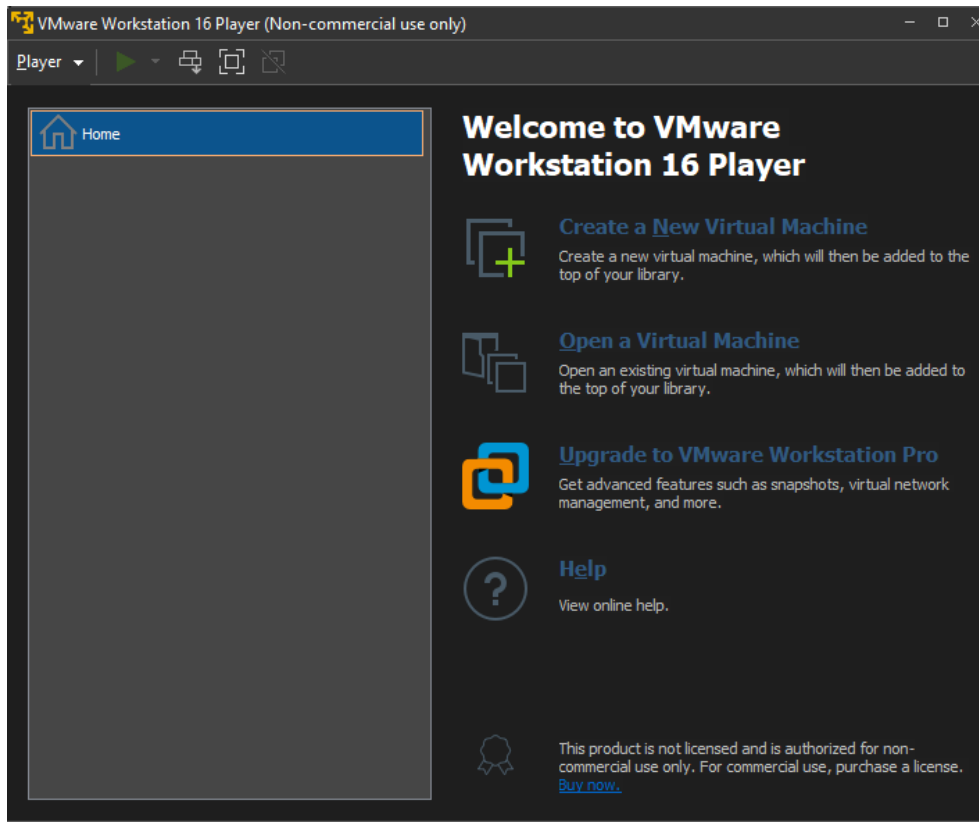

13) Welcome to VMware

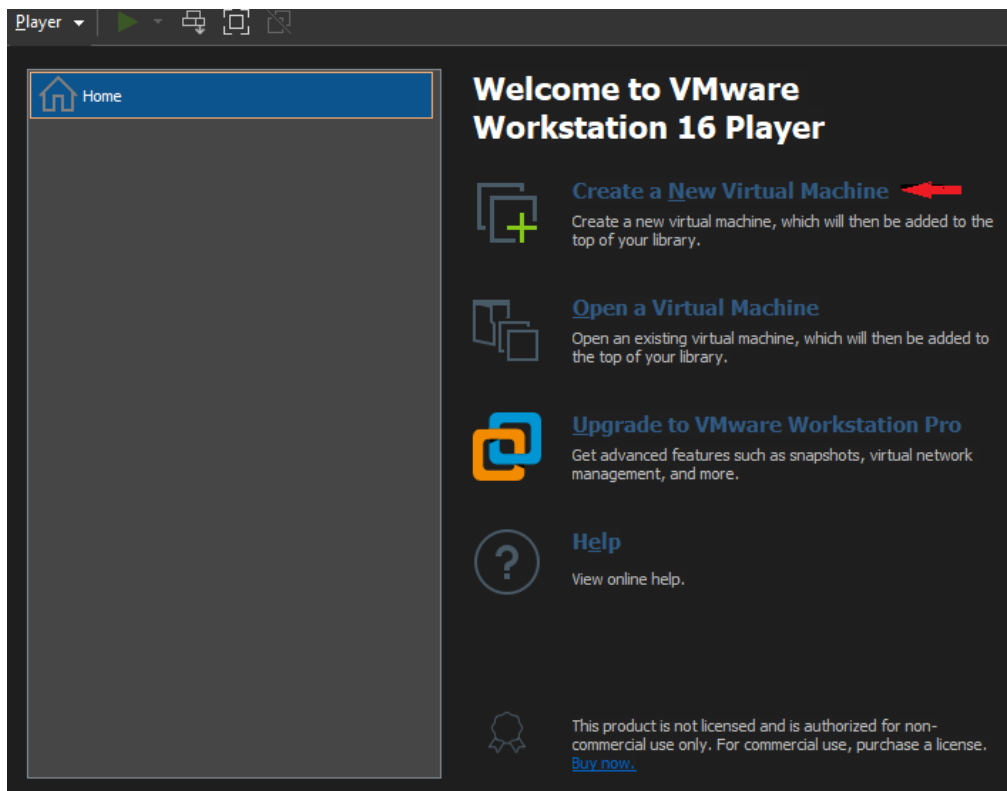

Installing Ubuntu on 20.04 LTS on VMware Workstation Player

- 1) Open your VMware workstation player

2) Click on **Create new virtual machine**

3) Click on **I will install the operating system later**

4) Click on Linux operating system

New Virtual Machine Wizard ✕

Select a Guest Operating System
Which operating system will be installed on this virtual machine?

Guest operating system

☐ Microsoft Windows
☒ Linux
☐ Other

Version

Ubuntu ▾

Cancel

6) Specify Disk Capacity

New Virtual Machine Wizard ✕

Specify Disk Capacity
How large do you want this disk to be?

The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine.

Maximum disk size (GB): 0

Recommended size for Ubuntu: 20 GB

☐ Store virtual disk as a single file

☒ Split virtual disk into multiple files

Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.

7) Customize the installation for creation of virtual machine

New Virtual Machine Wizard ✕

Ready to Create Virtual Machine
Click Finish to create the virtual machine. Then you can install Ubuntu.

The virtual machine will be created with the following settings:

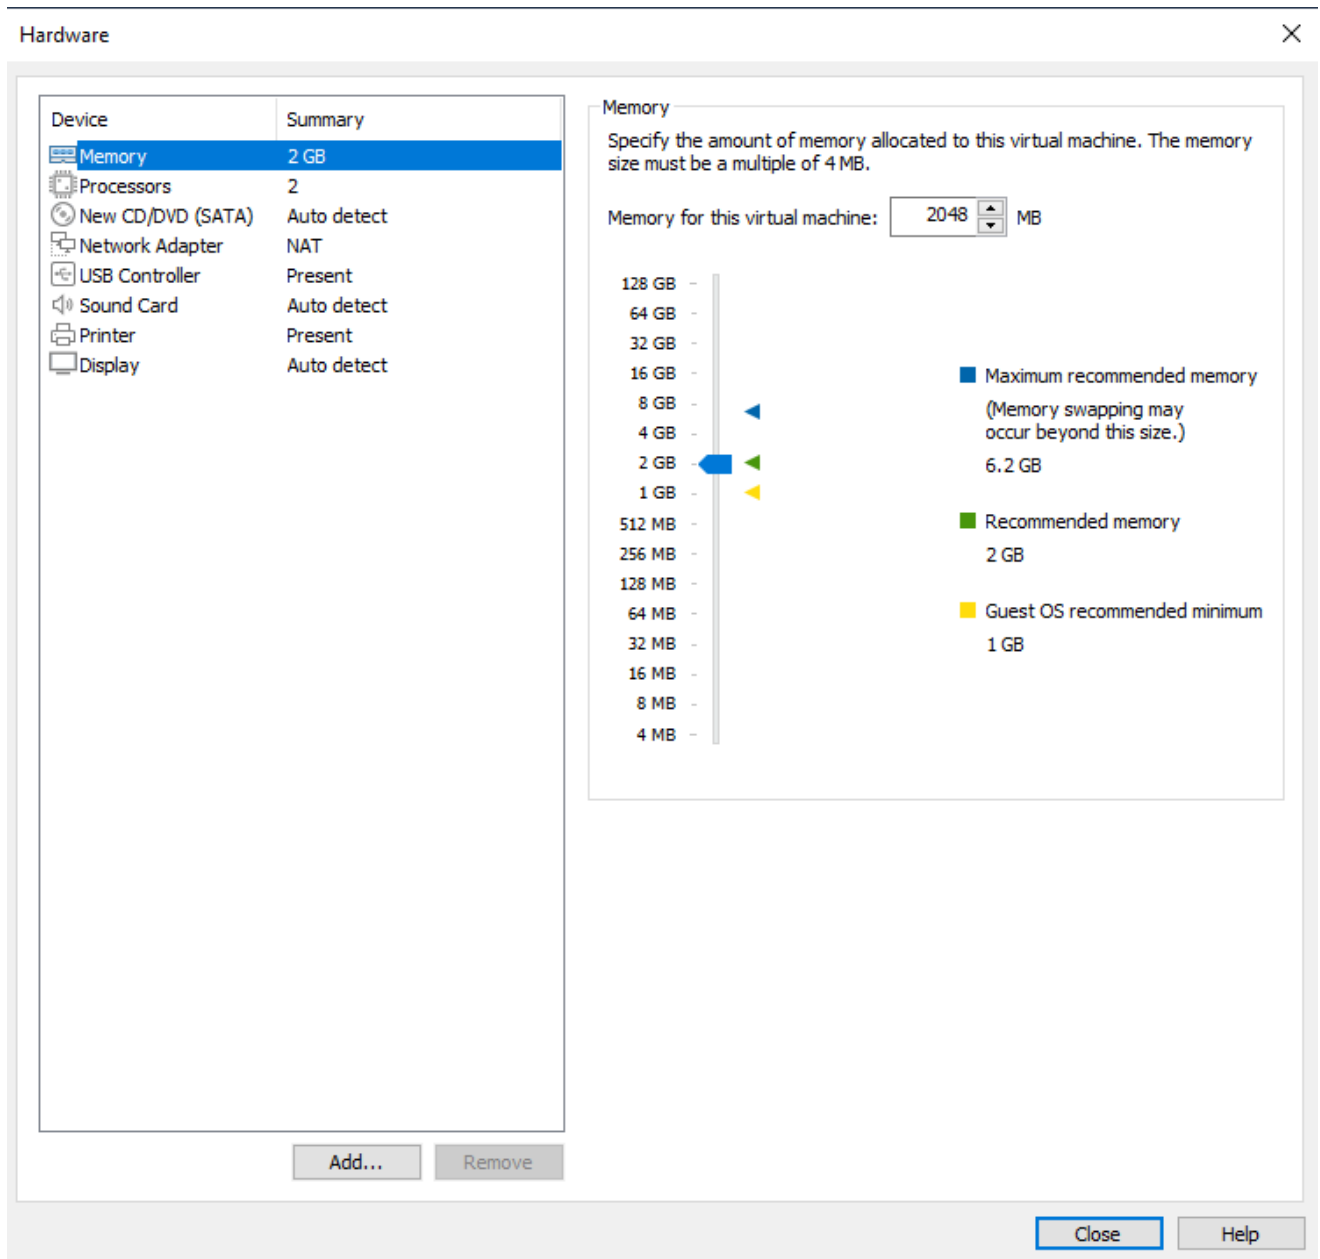

Name:	Ubuntu
Location:	C:\Users\Bren Saud\Documents\Virtual Machines\Ub...
Version:	Workstation 16.x
Operating System:	Ubuntu
Hard Disk:	100 GB, Split
Memory:	2048 MB
Network Adapter:	NAT
Other Devices:	2 CPU cores, CD/DVD, USB Controller, Printer, Sound...

Customize Hardware... ✓

< Back Finish Cancel

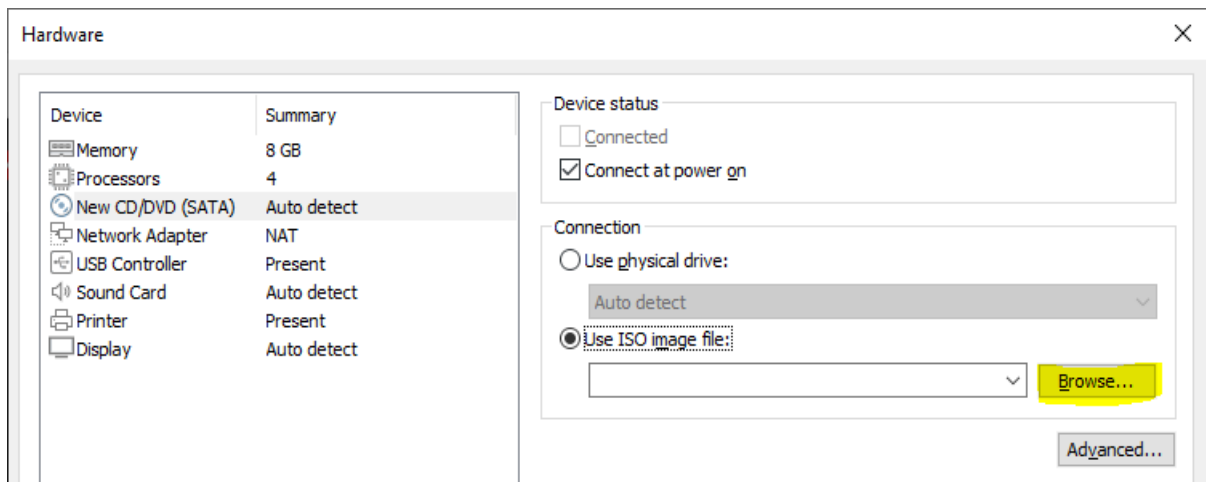

8) Hardware allocation

- Select 8 GB for memory
- For Processor core select 4 core

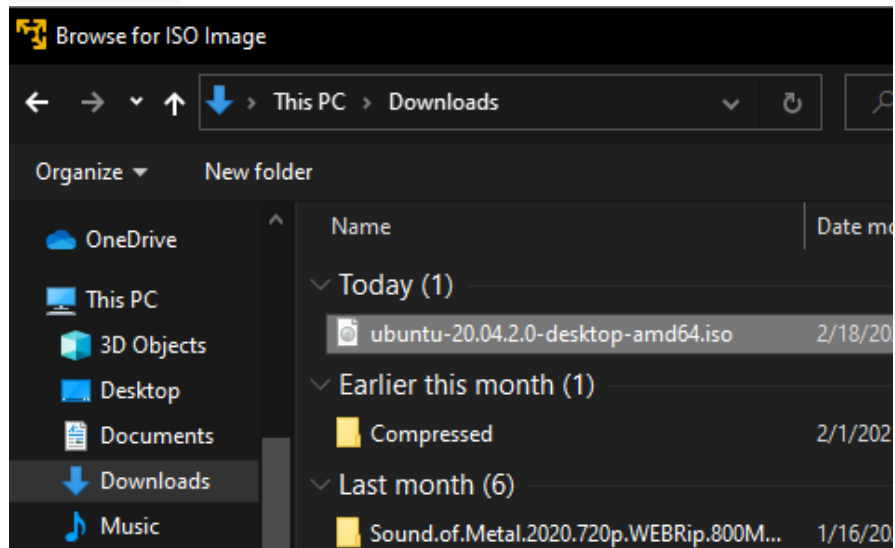

9) For CD/DVD (SATA)

- Click on Browse and select the iso file that has been downloaded

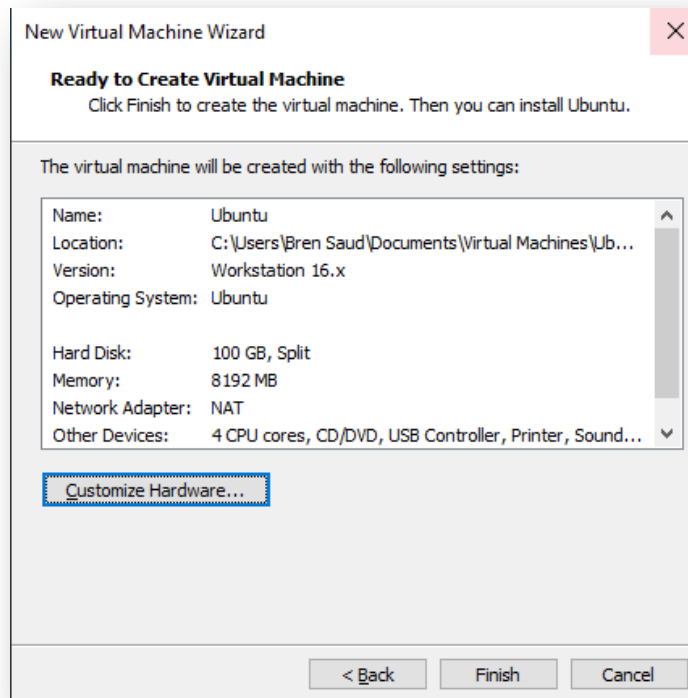

10) File selection

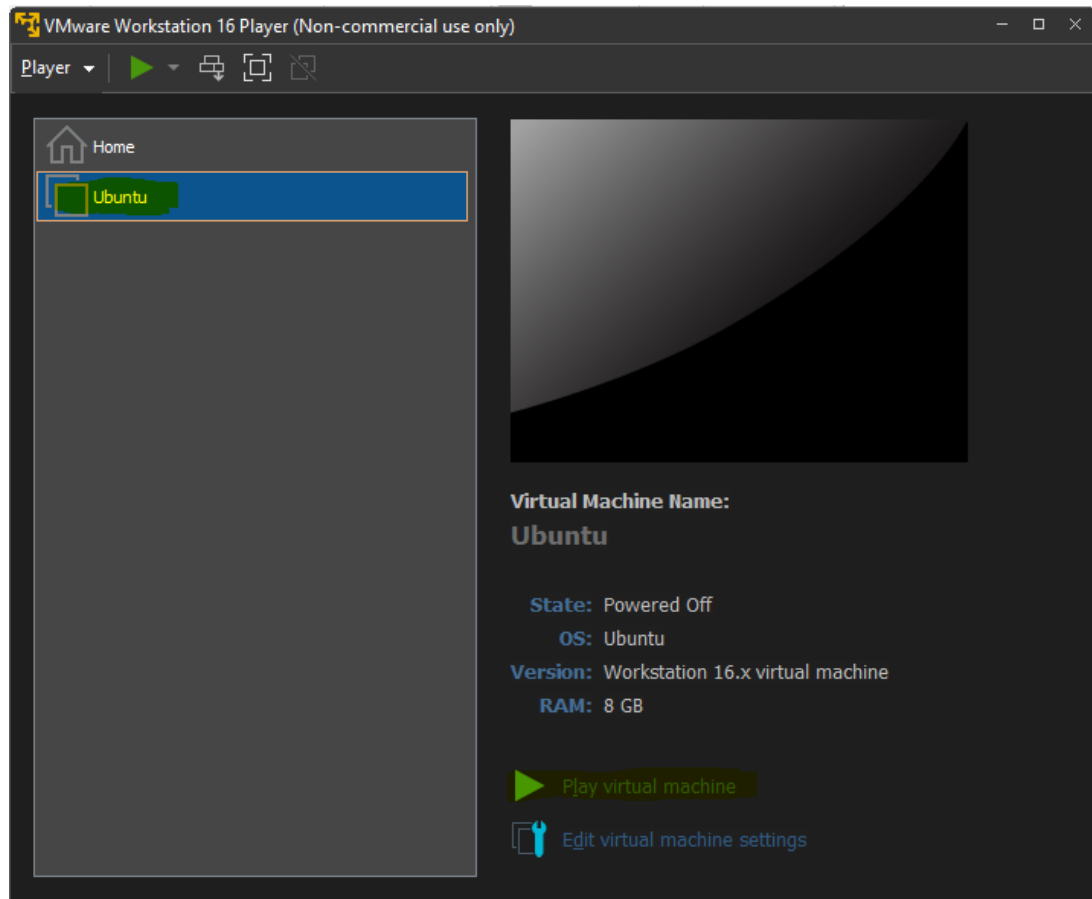

11) You change the other settings as well but here we will move on and click the close option

12) Now click on the finish button the begin the installation

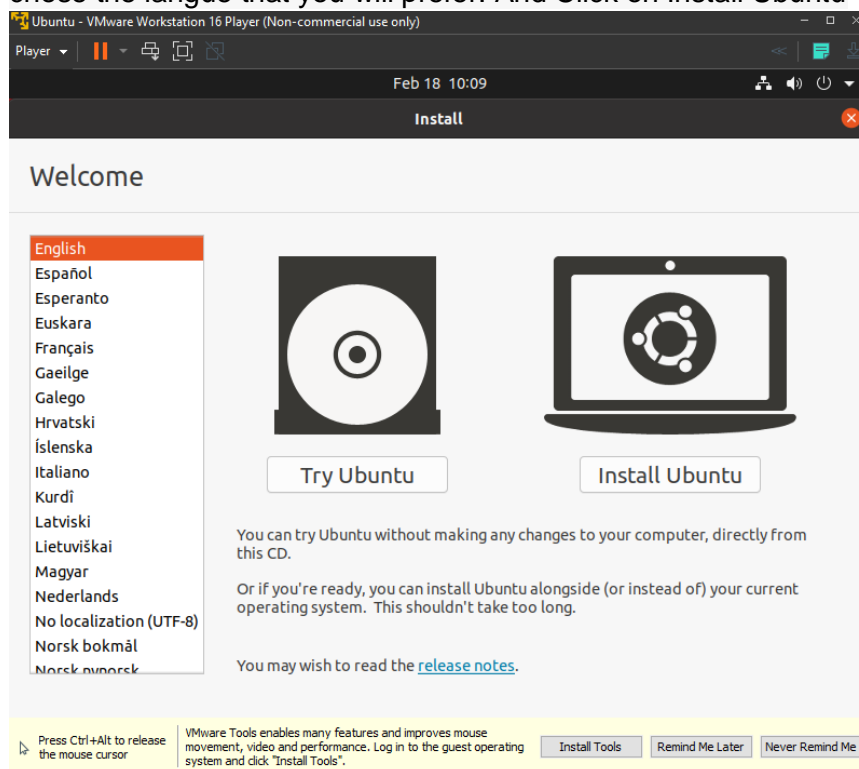

- 13) Click on the OS that you have created and click on play virtual option to start the Virtual OS

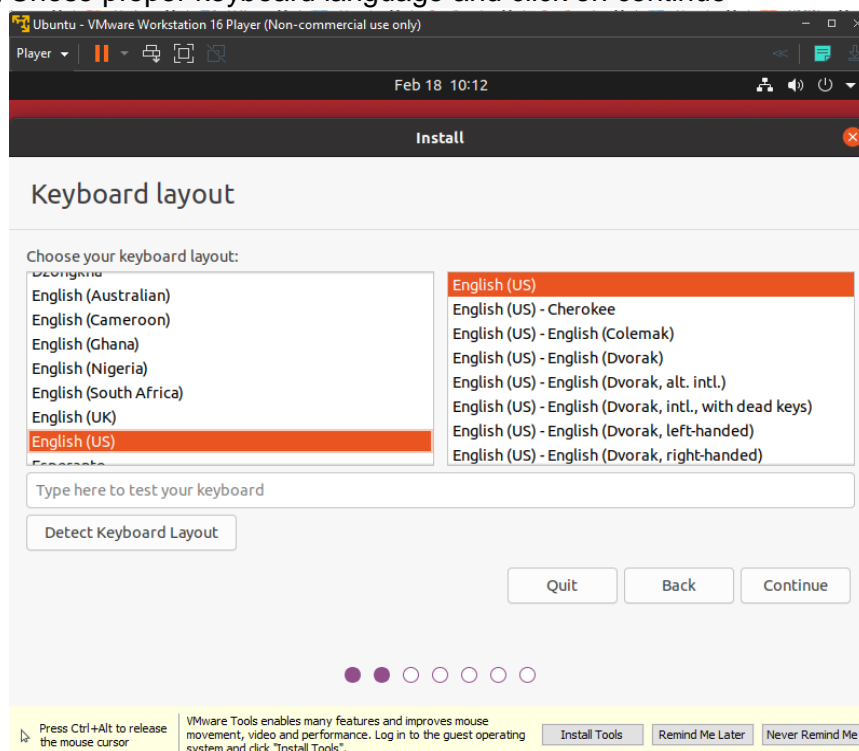

- 14) A new window will pop for software updates , click on download and install option

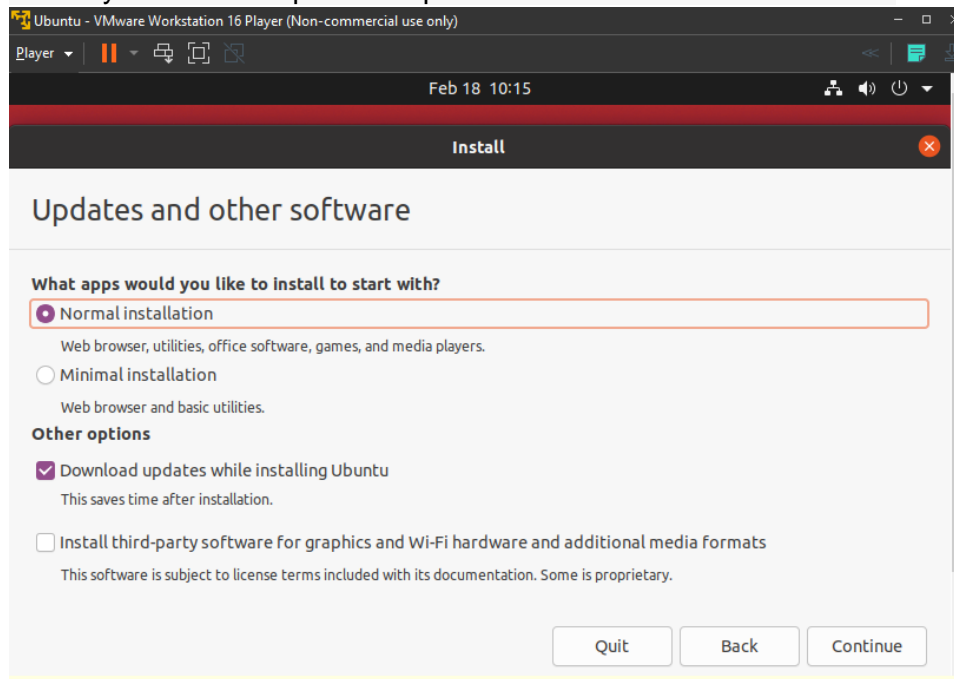

- 15) After the Process is finished you will see the following screen. Here you have to chose the langue that you will prefer. And Click on Install Ubuntu

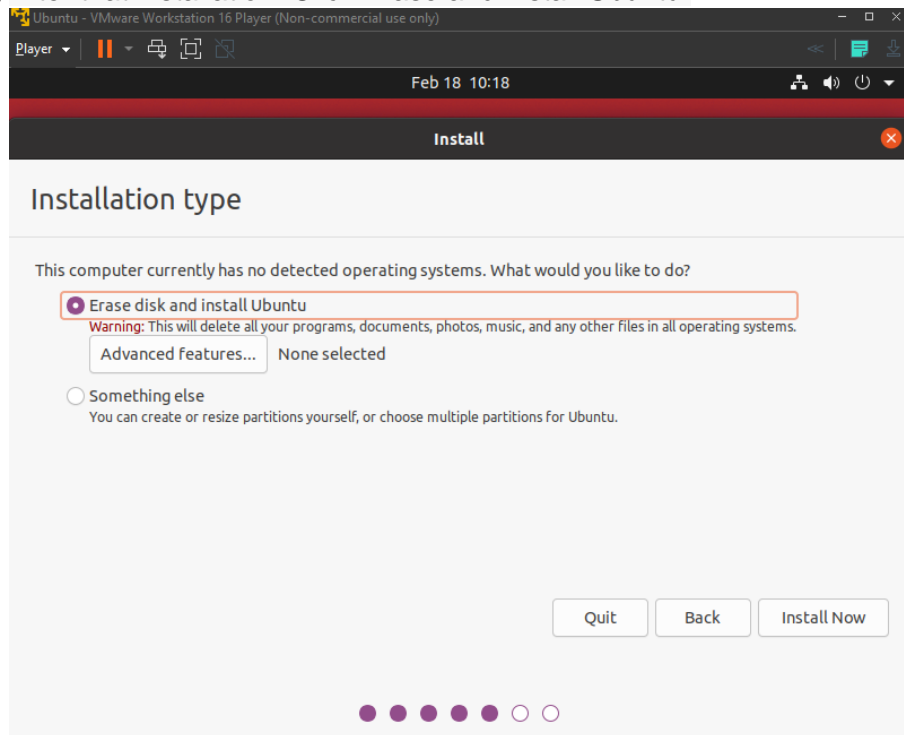

- 16) Chose proper keyboard language and click on continue

17) Chose your suitable option for updates and other software selection.

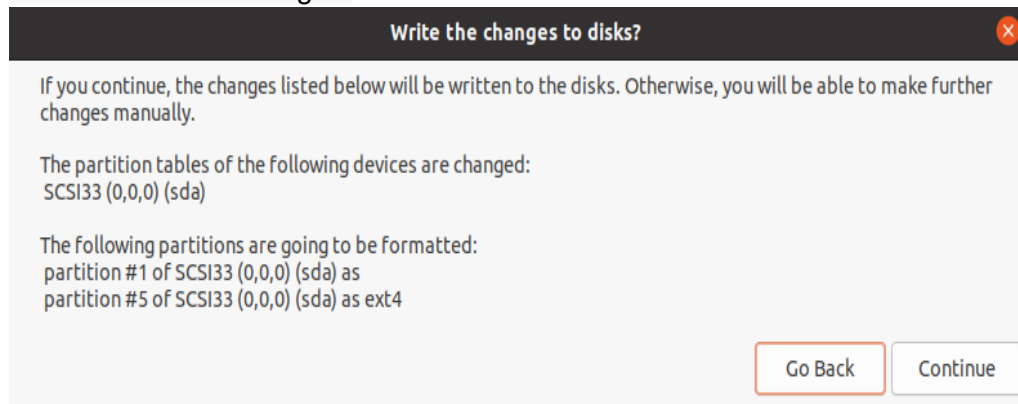

18) After that installation. Click Erase and install Ubuntu.

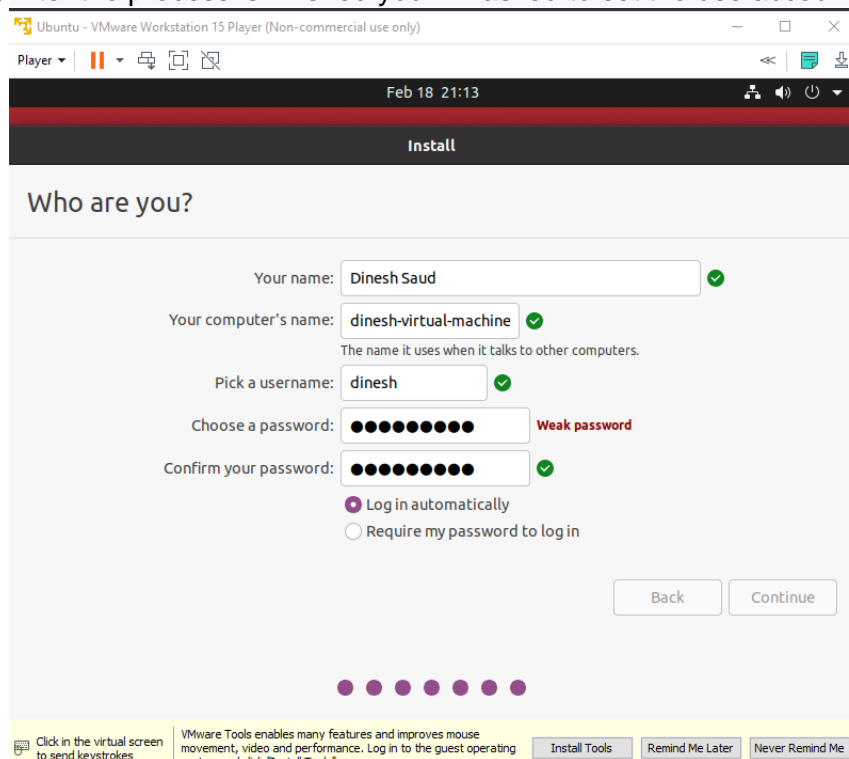

Note: We are not deleting anything on our windows.

19) Confirm for write changes.

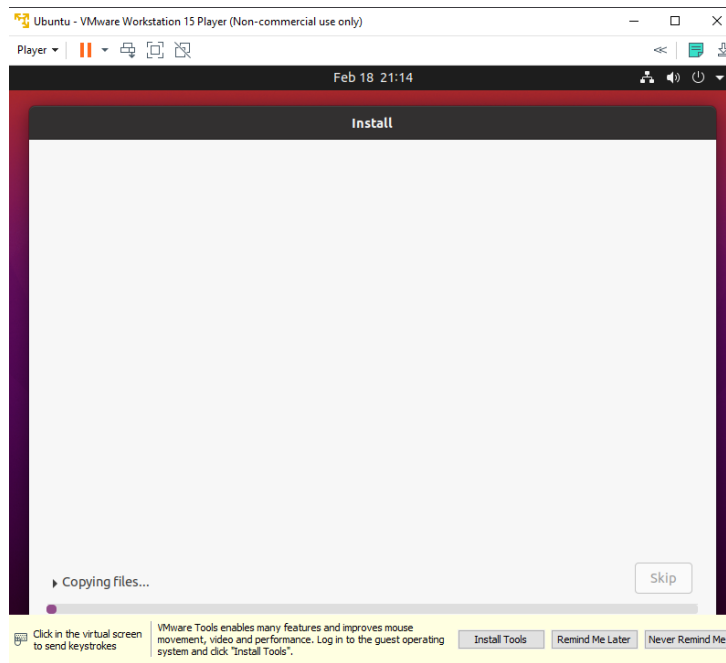

20) Chose the location

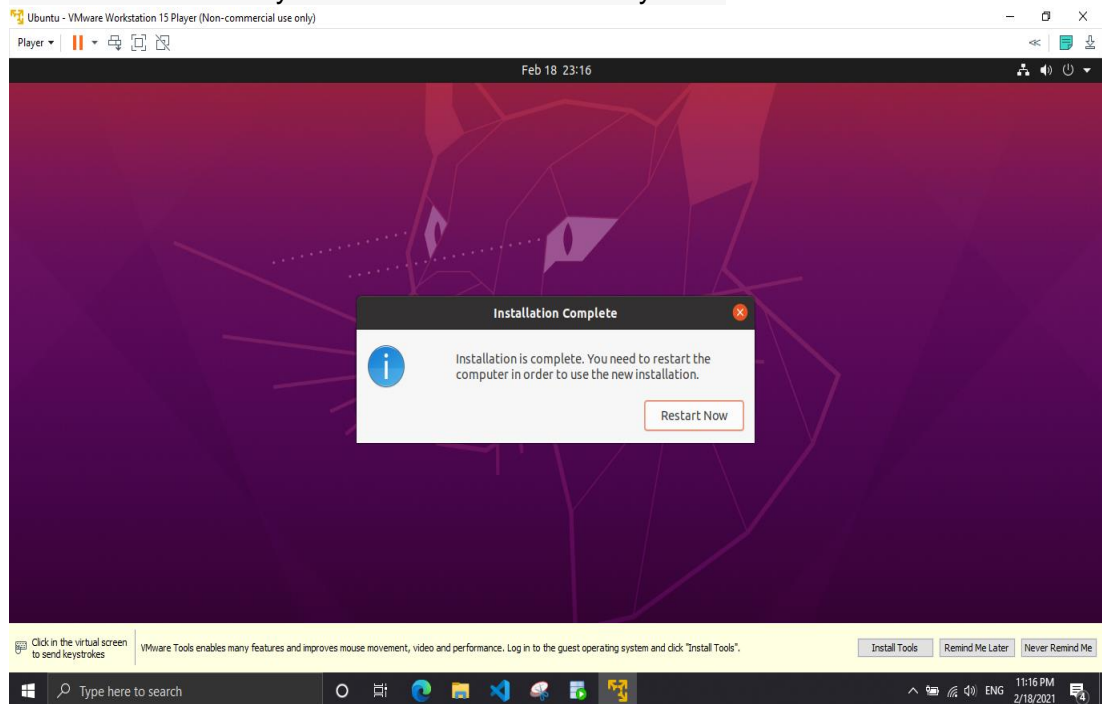

21) After the process is finished you will asked to set the use account and password.

22) Your Ubuntu installation will begin, it might take some time for installation.

23) After the installation you will have to restart the system.

!!** Congratulations **!!
